borders*

ESG reporting overview

At Aegon Asset Management, we are committed to active, engaged and responsible investment. Our comprehensive responsible investing approach includes three key pillars: ESG integration, active ownership and focused responsible investment solutions. As part of our commitment to responsible investment, we aspire to provide transparent and informative reporting on our responsible investing approach and activities.

This ESG report includes five primary components:

- **ESG integration and characteristics:** Overview of our approach to ESG integration and summary of the portfolio's ESG profile based on our proprietary ESG view.
- **ESG external view:** Summary of the portfolio's ESG profile based on external ESG categories or scores.
- **Sustainability framework:** Overview of the strategy's sustainability criteria and application within the portfolio.
- **Active ownership activities:** Overview of engagement and voting activities within the portfolio.
- **Climate Related Metrics:** Summary of the portfolio's carbon footprint including carbon impact metrics and intensity of holdings.

This report was prepared for the Aegon Sustainable Diversified Growth Fund as of 30 June 2024.

Technical terms are defined in the glossary at the end of the document or please visit <https://www.aegonam.com/en/glossary/> for definitions of the financial jargon and common investment terminology used within Aegon Asset Management's Investment reports.

Fund objective

To deliver a total return (capital growth plus income) that exceeds the UK Consumer Prices Index by at least 3% per annum over any five-year period.

Asset class breakdown

Our multi-asset strategies are composed of three component building blocks: equities, fixed income and alternatives. The chart below provides an indication of the breakdown of AUM by block for this portfolio at the reporting date.

Source: Aegon AM. Values as of reporting date. May not add to 100% due to rounding. Alternative holdings include listed property (REITs), listed infrastructure and renewable energy securities. Excludes cash and cash equivalents.

ESG integration and characteristics

Our Multi-Asset team’s primary task is to determine the asset allocation for the component building blocks of the strategy. Security selection within these building blocks is a collaborative effort led by the asset-class specialists within our fixed income and equity teams. It is here, in the bottom-up analysis, that determines issue selection, that all relevant factors, ESG or otherwise, that affect the durability of business models and bond cash flows are considered.

The focus of the process is around identifying and understanding risks and opportunities that may impact the relative attractiveness of an investment. This includes leveraging the ESG research from the equity and fixed income specialists where there is particular focus on macro developments (such as energy transition or social housing policy), as well as corporate governance (board structures, legal jurisdictions and executive pay policies).

Fixed income

ESG factors are systematically integrated into our bottom-up credit research process for sovereign and corporate credits. By integrating ESG considerations with economic factors, and drawing from specialized ESG research sources, the Credit Research teams seek to identify financially material ESG factors and arrive at an independent, comprehensive view of the investment.

Integration of ESG factors into the investment process first occurs as part of the fundamental credit research analysis for issuers. Our Credit Research teams integrate ESG information into their analysis by evaluating data from various third-party sources in combination with internal research to assign credits into a proprietary ESG category. Focus is given to the potential economic impact ESG issues may have on the issuer’s ability and willingness to meet debt obligations. The level of credit impact is categorized as one of five levels with increasing magnitude.

Aegon AM ESG Categories		
Category	Description	
1. Leader	The fundamentals are positively affected by effective ESG practices.	
2. Minimal risk	Fundamentally low exposure to ESG risks or presence of factors that mitigate most of the ESG risks.	
3. Event risk	ESG risk exposures could negatively affect the issuer fundamentals, but the effect is not measurable, and timing is uncertain.	
4. Fundamental risk	ESG risks are resulting in negative pressure on the issuer fundamentals, however we expect limited impact on the credit rating.	
5. Rating risk	ESG factors have resulted in a material negative effect on the issuer fundamentals, that may or may not be currently reflected in its credit rating.	

ESG category allocation of fixed income holdings

Please note that all information is provided for informational purposes and the reader should not assume that investments in the securities identified and discussed were or will be profitable.

Portfolio	
Weighted average ESG category	1.7
Fixed Income Coverage	100%

Source: Aegon AM. Values as of reporting date. May not add up due to rounding. Includes all fixed income holdings. Excludes cash and cash equivalents. ESG Categories are based on a scale of 1 to 5 where: 1: Leader; 2: Minimal Risk; 3: Event Risk; 4: Fundamental Risk; 5: Rating Risk.

Top and bottom fixed income issuers by ESG category

Top 5 issuers		
Name	ESG category	Portfolio weight
UK I/L GILT	1	13.8%
DIGITAL REALTY TRUST	1	0.8%
AMGEN	1	0.6%
UNITED STATES TREASURY	2	9.0%
AK RABOBANK CERTIFICATEN	2	1.3%

Bottom 5 issuers		
Name	ESG category	Portfolio weight
PINNACLE BIDCO	3	1.7%
AMERICAN WATER WORKS COMPANY	3	1.1%
TRIVIUM PACKAGING FINANCE	3	0.7%
ABN AMRO BANK	3	0.5%
UNITED STATES TREASURY	2	9.0%

All information is provided for informational purposes and the reader should not assume that investments in the securities identified and discussed were or will be profitable.

External ESG view of entire portfolio

Third-party ESG perspectives serve as a helpful input into our process. While informative, the metrics are prone to limitations and do not replace our own proprietary view on ESG matters.

ISS	Portfolio
ESG Performance Score	55.0
Coverage*	79%

MSCI	Portfolio
MSCI Overall ESG Score	7.5
Coverage**	72%

Source: ISS ESG[®]. Values as of reporting date. The ISS ESG Performance Score is a numerical expression of the alphabetic overall rating (A+ to D-) on a scale of 0 to 100, where 0 is very poor and 100 is outstanding. The alphabetic ESG Ratings reflect a company's demonstrated ability to adequately manage material ESG risks, mitigate negative and generate positive social and environmental impacts, and capitalize on opportunities offered by the transformation towards sustainable development. Within the ISS Performance score scale (1-100), 50 represents the normalized Prime threshold – Prime status is granted to companies with an ESG performance in line with or above the respective industry rating (B-, C+, C). The industry rating is determined based on an assessment of the industry's overall magnitude of risk exposure to ESG factors. Reproduced with permission. Not further distribution.

Source: MSCI. Values as of reporting date. The Overall ESG Scores represents either the ESG Ratings Final Industry Adjusted Score or Government Adjusted ESG Score of the issuer. ESG Ratings indicate how well an issuer manages its most material ESG risks relative to sector peers. Government Ratings indicates overall environmental, social, and governance (ESG) performance of a region. The score is on a 0-10 scale, where 0 is very poor and 10 is outstanding. Certain information ©2024 MSCI ESG Research L.L.C. Reproduced with permission. Not further distribution.

**MSCI does not cover sovereign holdings which accounts for 23% of the fund as per 30 June 2024

*ISS does not cover sovereign holdings which accounts for 23% of the fund as per 30 June 2024

Sustainability framework

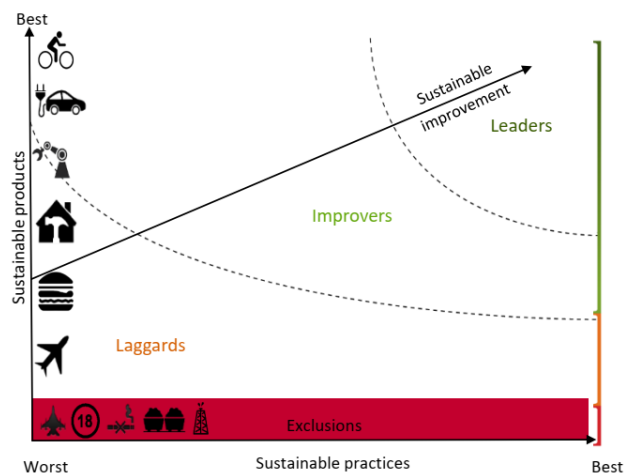

We define sustainability as a global economic state that meets the needs and aspirations of people today and in the future, while protecting and improving the environment and preserving the quality of life for all. We believe there is growing interest from consumers, governments and companies in promoting sustainability globally.

Our sustainability-themed strategies go beyond the universal integration of ESG in our investment analysis to incorporate our sustainability philosophy, criteria and process throughout the entire portfolio.

Sustainability analysis is a key consideration when assessing investment opportunities. This helps us to identify structural growth opportunities in addition to avoiding unnecessary ESG-related risks. We believe that a strong sustainable focus can provide a long-term tailwind to performance. We consider sustainability performance within the context of a company’s industry-level competitive landscape, in relation to its peers and the geographic regions in which it operates.

We define sustainable businesses as those where products, services and business practices are positively aligned with at least one of six sustainability themes. In a bottom-up assessment that combines quantitative and qualitative analysis, we consider the impact of the products and services a company offers, as well as the nature of its operational practices and any improvement over time. If this contributes positively to one (or more) of the themes, the issue will qualify as ‘sustainable’ and be eligible for investment. The findings are used to create a recommendation to classify the security into one of our three categories:

- Leaders** - Companies that meet a large amount of our absolute sustainability criteria and are demonstrably leaders in their sub-sector.
- Improvers** - Companies where material sustainability issues have been identified and the company is showing clear evidence of significant improvements in its sustainability performance.
- Laggards** - Companies that are either excluded due to a combination of poor product exposure (e.g. tobacco or defence manufacturers), poor sustainability disclosure and performance and/or with little evidence of a desire to improve.

Sustainability category allocation

Active ownership

We believe taking responsibility as an investor also means being a truly active owner, not just as a shareholder but as a financier more broadly. With a long-term focus, we have built a robust active ownership program that includes exercising shareholder voting rights in the best interest of our clients and engaging with bond or equity issuers in an effort to mitigate ESG risk, to help better understand the opportunities that companies face and encourage more sustainable practice. We aspire to influence positive change to improve companies' performance and to pursue competitive returns for our clients.

Engagement activity

We believe taking responsibility as an investor also means being a truly active owner, not just as a shareholder but as a financier more broadly. We aspire to influence positive change by engaging in dialogue with issuers, either bilaterally or as part of an investor consortium. This dialogue can provide opportunities to highlight ESG risks, inform management on sustainability concerns, promote growth in sustainable business lines or advocate for changes that align with responsible investment standards. Successful engagement can also create new investment opportunities. By spearheading engagement and exercising voting rights, we use our voice and actions to try to effect positive change.

We classify our engagements by topic: general disclosure, where we are seeking additional information from the issuer on practices or products; and by ESG headings, where we are seeking performance improvements in environmental, social or governance areas respectively.

Engagements are tracked with a milestone-based approach:

Milestone 1	We have flagged our concerns and contacted the company
Milestone 2	The company responds (letter, email, phone call) and the dialogue starts.
Milestone 3	The company has taken concrete steps to resolve our concerns.
Milestone 4	The engagement goal has been achieved.
No further action required	In some cases our assessment changes and - following discussions with the company - we do not pursue the engagement. We categorize the engagement as 'no further action required'.

Over the one-year to 30 June 2024 we have had 58 engagements with 41 issuers. Below we break this down by milestone and topic.

By milestone	Engagements
Milestone 1	40%
Milestone 2	21%
Milestone 3	26%
Milestone 4	10%
No further action required	3%

By topic

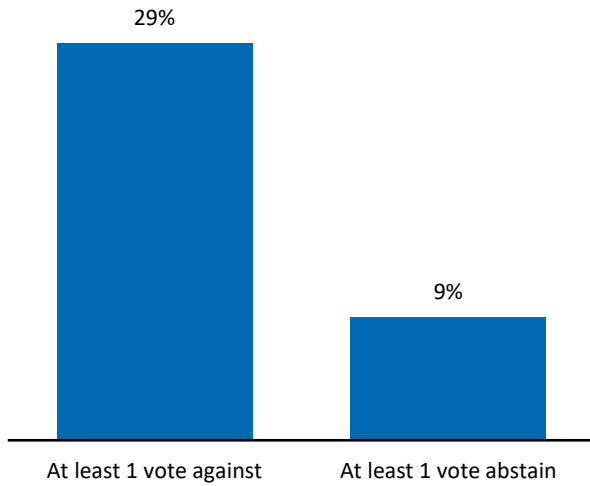

Source: Aegon AM. Includes engagement activity for issuers held in this portfolio during the one-year period ending on the reporting date. Issuers may be engaged more than once over the same period and on one more than one topic.

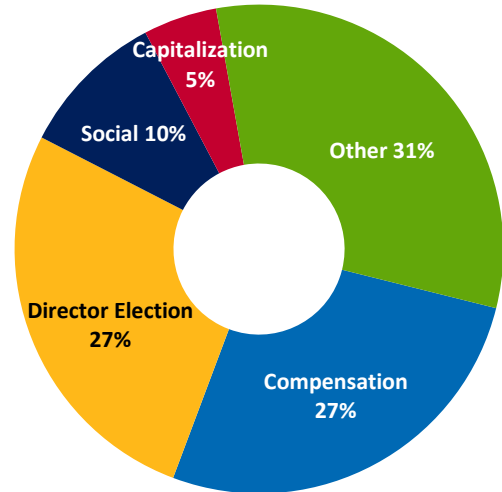

Voting activity

Over the one-year period to 30 June 2024, we voted in 91 meetings conducted by issuers in the portfolio. Below we break this down by voting intention.

Overview of votes cast

By resolution topic

Source: Aegon AM. Includes voting activity for issuers held in this portfolio during the one-year period ending at the reporting date. Multiple votes may be cast for the same meeting and on one more than one topic.

Climate Related Metrics

Climate change is one of the most urgent risks facing the sustainability of our planet. We measure and report the carbon footprint and other climate metrics of portfolios in order to help our clients understand the climate impact of their investments.

Total emissions	The total emissions of a portfolio can be determined by multiplying the carbon footprint times the total amount invested in GBP millions. Total emissions will vary by exposure and is thus not included in the table below.
Carbon Footprint	This metric represents the financed carbon emissions (only Scope 1&2 emissions are included in this report) of a portfolio normalised by the total portfolio value in millions of GBP. This metric is useful for comparing portfolios but is sensitive to the same EVIC data dependencies detailed above under financed emissions. In addition, when comparing changes in carbon footprint over time, the metric can be driven by changes in EVIC rather than changes in carbon emissions. To correct for this, PCAF has suggested applying an adjustment factor to the formula to enable comparison of carbon footprint over time. This formula is conceptually endorsed by AAM, but fails to consider the implications of portfolio composition changes as well as data availability. As such, the carbon footprint used in this report has not been calculated using any adjustment factors, but we are awaiting and monitoring the maturation of the calculation methodology guidance from PCAF.
GHG intensity	This metric represents the carbon emissions (only Scope 1&2 emissions are included in this report) of an issuer divided by their revenue in millions of GBP which is then allocated by portfolio weight. This metric is useful for comparison between portfolios of different sizes and allows for comparison of issuers’ carbon intensity. However, companies with higher prices compared to their peers may be favourably impacted when normalising their emissions by revenues. In the future, we also expect the same inflation adjustment factor to be applied to issuers’ revenues as suggested for issuers’ EVIC, but to date, no specific guidance has been issued on this metric by PCAF.
Coverage	Coverage of our portfolio gives an indication on the data availability per metric from our external provider – it should be noted that exposures to assets other than public equities, fixed income and sovereign bonds are filtered out of the report. Coverage is expressed as a %, which is the sum of the market value of portfolio holdings that are covered by ESG data. Securities with no ESG data coverage are disregarded from the aggregation methodology for all metrics and the rest of the dataset is renormalized.

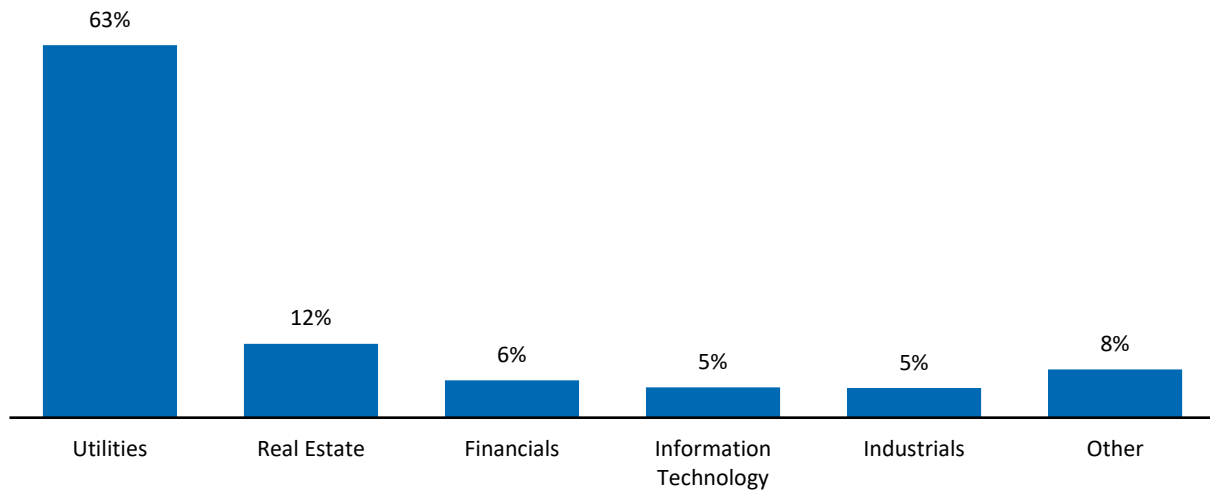

Carbon footprint metrics

Metric	Unit	Portfolio	Portfolio coverage
Total emissions	tCO2e	14,728	61%
Carbon Footprint	tCO2e / GBP million invested	40	61%
GHG intensity	tCO2e / GBP million revenue	182	62%

Source: Aegon AM. Values as of reporting date. Climate metrics calculated in line with Sustainable Finance Disclosure Regulation (SFDR) and Taskforce for Climate-related Financial Disclosures (TCFD) recommendations. Carbon Footprint and GHG Intensity values have been adjusted to account for variance in coverage. Climate change data availability may change over time and characteristics will vary. Certain information ©2024 Sustainalytics, MSCI ESG Research L.L.C. and Bloomberg Finance L.P. Reproduced with permission. Not for further distribution.

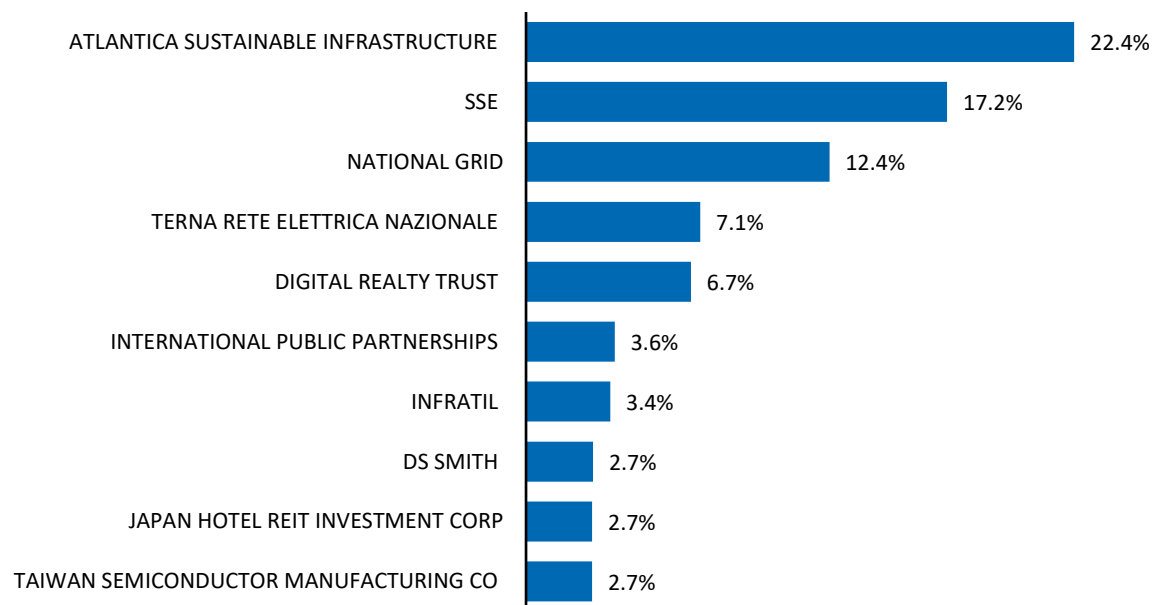

Sustainalytics and MSCI do not cover sovereign holdings which accounts for 23% of the fund as per 30 June 2024

GHG Intensity: By sector

Source: Aegon AM. Values as reporting date. Reflects sector allocations (excluding cash and cash equivalents) based on GHG intensity. All information is provided for informational purposes only and the reader should not assume that investments in the securities identified and discussed were or will be profitable. Certain information ©2024 Sustainalytics, MSCI ESG Research L.L.C. and Bloomberg Finance L.P. Reproduced with permission. Not for further distribution.

GHG intensity by issuer (top-10)

Certain information ©2024 Sustainalytics, MSCI ESG Research L.L.C. and Bloomberg Finance L.P. Reproduced with permission. Not for further distribution.

Investment policy and risks

Investment policy

The Fund is a flexible multi-asset fund that invests across a range of asset classes on a global basis, taking into account factors such as global economic trends and growth opportunities. As a result, at any one time the Fund may be diversified across asset classes, sectors, currencies or geographies in various proportions.

At least 80% of the Fund will usually consist of equities, corporate bonds and government and public securities and derivatives, with some flexibility to hold high levels of cash to meet the investment objective. All of the Fund's investments are subject to the ACD's sustainability criteria relevant for each asset class. The ACD will, firstly, apply an exclusionary screen to exclude investments which the ACD considers have a negative impact on society and/or the environment. The ACD then, through applying a detailed analysis, focusses on the equities and bonds of companies which are aligned with, or are expected to contribute to, one of the ACD's sustainability themes. The analysis for government securities will permit investment in governments showing, in the ACD's view, significant progress towards achieving the UN's Sustainable Development Goals. The ACD will use a combination of external third party research and internal analysis in the application of its sustainability criteria.

To the extent not fully invested in the main asset classes above, the Fund may invest in other transferable securities, collective investment schemes (up to 10% of Net Asset Value and including schemes managed by the ACD or its affiliates), money market instruments, cash and near-cash. It is intended that investment in any other collective investment schemes will be predominately in approved money market instruments.

Through these investments, the Fund may obtain an indirect exposure to property, commodities and other alternative investments, such as companies that specialise in infrastructure and renewable energy. Derivatives may be used for investment purposes, for example exposure to assets may be gained through the use of derivatives (including long and short positions for the purposes of adjusting risk exposures). Derivatives may also be used for efficient portfolio management (including hedging to reduce currency risk).

The Fund may invest in assets denominated in any currency. Non-Sterling exposure will typically be hedged back to Sterling to reduce currency risk but the Fund is permitted to take active non-Sterling exposure. A substantial proportion of the Scheme Property of the Fund may consist of cash, near cash and/or deposits. The Fund is actively managed and can invest in companies of any market capitalization (small, medium or large) and in any industry sector. Through diversification, the Fund also looks to achieve lower volatility (i.e. changes in value) than global equities.

Risks

The main risks are:

- **Credit:** An issuer of bonds may be unable to make payments due to the Fund (known as a default). The value of bonds may fall as default becomes more likely. Both default and expected default may cause the Fund's value to fall. High yield bonds generally offer higher returns because of their higher default risk and investment grade bonds generally offer lower returns because of their lower default risk.
- **Liquidity:** The Fund's value may fall if some investments, especially in smaller companies or high yield bonds, become more difficult to trade or value due to market conditions or a lack of supply and demand.

For more details on the risks for this fund please see the KIID or Prospectus at www.aegonam.com/documents.

Target benchmark: Target benchmark: UK Consumer Prices Index (CPI) plus 3%. UK CPI is selected as a commonly accepted measure of UK inflation. We consider that exceeding CPI by at least 3% over 5 years is an attractive return and therefore an appropriate target benchmark in relation to which the Fund is managed. Comparison of the Fund's performance against the above target benchmark will allow investors to determine whether and to what extent the Fund has delivered returns in excess of inflation. Any comparison of the Fund's performance against this benchmark should be performed over a 5 year period to provide the most useful medium term comparison.

Glossary

ESG Integration

ESG integration means incorporating financially-material ESG factors into our investment analysis to better understand risk and uncover potential opportunities.

Active Ownership

Active ownership is the use of the rights and position of ownership to influence the activities or behaviour of investee companies. Active ownership can be applied differently in each asset class. For listed equities, it includes engagement and voting activities.

Carbon Footprint

This metric represents the financed carbon emissions (only Scope 1&2 emissions are included in this report) of a portfolio normalised by the total portfolio value in millions of GBP. This metric is useful for comparing portfolios but is sensitive to the same EVIC data dependencies detailed above under financed emissions. In addition, when comparing changes in carbon footprint over time, the metric can be driven by changes in EVIC rather than changes in carbon emissions. To correct for this, PCAF has suggested applying an adjustment factor to the formula to enable comparison of carbon footprint over time. This formula is conceptually endorsed by AAM, but fails to consider the implications of portfolio composition changes as well as data availability. As such, the carbon footprint used in this report has not been calculated using any adjustment factors, but we are awaiting and monitoring the maturation of the calculation methodology guidance from PCAF.

Scope 1, 2 and 3 emissions

Scope 1 carbon emissions are namely emissions generated from sources that are controlled by the company that issues the underlying assets.

Scope 2 carbon emissions are namely emissions from the consumption of purchased electricity, steam, or other sources of energy generated upstream from the company that issues the underlying assets.

Scope 3 carbon emissions are namely all indirect emissions that are not covered by points (I) and (II) that occur in the value chain of the reporting company, including both upstream and downstream emissions, in particular for sectors with a high impact on climate change and its mitigation.

Important information
